

A tool that makes flushing a water heater...easy.

The mission of Sediment Buster® is to prolong the life of your water heater, thereby improving your water clarity, enabling your tank to heat up faster, increasing your water pressure, and ultimately saving you money. To achieve this, our master plumber invented a tool called the Sediment Buster®, a water heater flushing, cleaning, and draining tool. Not only does Sediment Buster® tackle the toughest clogs with ease, but it also stirs, lifts, and removes unwanted dirt, sediment, and minerals from the tank.

Sediment Buster® originated from a master plumber who grew weary of the challenges posed by removing full water heater tanks from basements. Rather than resorting to makeshift tools like coat hangers to remove clogs, he conceived the idea of using air pressure, and Sediment Buster® was born. Sediment Buster® is now a preferred tool for plumbers and DIY homeowners!

Sediment Buster® holds a trademark, utility patent, and reserves all copyrights. With a growing reputation for quality in the marketplace, we are determined to protect our intellectual property by any legal means necessary. Be advised that Sediment Buster LLC will report any infringing listings.
